The Medical officers reports that as it is probable we may suffer from a visitation of Cholera during the ensuing season it is important that any defect in the drainage sewerage or Ventilation of the Establishment should be speedily corrected, as regard, the main drain that separates the workhouse premises from Fair Hill he thinks it would be advisable to have it narrowed to about two feet flagged at bottom so as to keep it at all times free from nuisance and to give a sufficient fall for the water, with respect to the sewers they should be all examined and cleared out every two months as to the manure it should either be turned out and dug into the land or else made into a heap and spread with fresh earth as often as may be required, with regard to ventilation little requires to be done there are however two wards in the Infirmary that formerly constituted the Male Female & Child wards that require additional windows and ventilation, which it would be advisable to refer to the visiting Committee
